

I benefit from listening to XM Satellite Radio and its traffic and weather channels. These channels provide a variety of useful programming which is informative and unique in delivery (both technology and representation). Satellite radio provides variety and quality that are not available through other standard radio means. These services are paid for via a subscription cost and should not be constrained like a standard open radio transmission and it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear. I respectfully urge the FCC to reject the NAB's petition 04-160 and to support XM's ability to provide the high quality programming that I currently enjoy. Thank you.
